Innovative Solutions in View

inUnum is an innovative technology company based in the Principality of Liechtenstein. Tasks that inspire us, passion in what we do, motivation, and teamwork are the prerequisites for our solutions and our success for many years.

To develop new 3D scanning and reality capture technologies and applications, we are looking to strengthen our specialist team with a

Mechatronics technician (all genders)

You are responsible for the conception and development of mechatronic solutions for our mobile 3D scanner. Your tasks include designing innovative technical solutions, integrating mechanical and electronic components, developing software modules, and ensuring smooth functionality of the overall system. Your contribution plays a central role in the further development and optimization of our state-of-the-art 3D scanner.

We look forward to having you become a part of our team.

Your qualifications include:

- Technical degree in the fields of mechatronics, electrical engineering, mechanical engineering, or a comparable education
- Knowledge in the area of 3D printing
- Practical experience with C/C++
- Analytical thinking skills, very good understanding of systems, and pronounced ability to learn
- Teamwork and ability to work independently
- Proficiency in English, both written and spoken

We offer you:

- Extraordinary tasks in unconventional work areas
- The opportunity to learn new things and grow with the tasks
- A straightforward work environment where human values are important
- State-of-the-art equipment and ergonomic workstations
- 40-hour workweek (100%), 5 weeks of vacation, flexible working hours

Are you interested in this challenge and want to join our team? Then send us your application documents via email to info@inunum.com
